## FEATURES

### Smartphone Connectivity

Complementing the Versys 1000 S's TFT dashboard is a Bluetooth chip built into the instrument panel which enables riders to connect to their motorcycle wirelessly. Using the smartphone application "RIDEOLOGY THE APP," a number of instrument functions can be accessed, contributing to an enhanced motorcycling experience.

### TFT Full Colour Instrumentation

The compact all-digital TFT colour instrumentation gives the cockpit a high-tech, highgrade appearance. The high-grade full colour display features TFT (thin-film transistor) technology, delivering a high level of visibility. The screen's background colour is selectable (black or white), and screen brightness adjusts automatically to suit available light. In addition to scrollable multi-function windows, two display modes offer riders a choice of how they want their information presented.

### LED Cornering Lights

Lights built into the shrouds help illuminate the road when cornering at night. Each of the three lights has a fixed direction and is activated based on lean angle. As the bike leans over, the lights come on in order, creating a wider illuminated path in the direction the bike is heading.

## KQS (Kawasaki Quick Shifter)

Complementing the Versys 1000 S's exhilarating engine character, the model's standard equipment includes a quick shifter that enables clutchless upshifts and downshifts for seamless acceleration and quick and easy deceleration

## Electronic Cruise Control

Kawasaki's cruise control system allows a desired speed to be maintained with the simple press of a button. Once activated, the rider does not have to constantly apply the throttle. This reduces stress on the right hand when traveling long distances, enabling relaxed cruising and contributing to a high level of riding comfort.
